SUMMARY

Second-year Computer Science student building full-stack web apps and Python + AI projects. Currently learning the MERN stack and preparing to take on freelance web development work. Comfortable turning an idea into a working, documented prototype, from backend logic to a clean, responsive UI.

EDUCATION

B.Tech, Computer Science and Technology 2025 - 2029 (expected)
SVERI's College of Engineering, Pandharpur | Currently in second year

TECHNICAL SKILLS

Web: HTML5, CSS3, JavaScript, responsive design
MERN (learning): MongoDB, Express.js, React, Node.js
Backend and Data: Python, Flask, SQLite, CRUD workflows, PostgreSQL (concepts)
AI / Vision: OpenCV, LLM APIs (Groq), voice interfaces, YOLOv8 and ArcFace (design)
Core and Tools: C (data structures and algorithms), Git, GitHub, GitHub Pages

PROJECTS

JARVIS AI Assistant — GitHub

Python, Tkinter, OpenCV, Groq API

- Built a desktop voice assistant with app launching, system monitoring and long-term memory.
- Designed an animated Iron Man-style HUD interface and a clap-detection launcher.

Student Management System (Team Project)

Flask, SQLite, HTML/CSS/JavaScript

- Built the frontend and CRUD workflows for managing student records with a Python Flask backend.
- Prepared the SRS document and project report with a team of four.

SERV-ALL (Concept / in design)

FastAPI, PostgreSQL, WebSockets, Maps API, React Native

- Designed a universal servicing marketplace ("Uber for servicing") for gadgets, appliances and vehicles, with real-time bidding that shows the top 3 offers from nearby shops.
- Planned a mobile-first MVP with live location tracking, followed by web (PWA) and desktop versions.

CCTV-Based Smart Attendance System (Concept)

YOLOv8, ArcFace, PostgreSQL, pgvector

- Designed a pipeline for face detection and recognition from CCTV feeds, storing embeddings in a vector database for automatic attendance.

Cafe Management System (In progress)

Python, web-based

- Planning and documenting a cafe management web app, modeled on the Student Management System.

Zippy Dispatch

HTML, CSS

- Designed a responsive delivery service website with a clean landing page.

Developer Portfolio — karanmolane.is-a.dev

HTML, CSS, JavaScript, GitHub Pages

- Built and deployed a personal portfolio on a custom is-a.dev subdomain.

LEARNING AND INTERESTS

- Following the freeCodeCamp full stack path, starting with HTML, then CSS and JavaScript.
- Taking the NPTEL Software Engineering course.
- Goal: start freelancing with a MERN stack focus (Upwork profile planned for January 2027).
